

Yet an other project to save the world

Yet an other project to save the world

This is going to be a boring long presentation. With lots of text.
(Yes I'm doing it wrong.)
Because i have no other way with my social media know how

Review of "Yet Another Project to Save the World" by Bram Diederik from chatgpt

★★★★☆ (4/5)

Bram Diederik's Yet Another Project to Save the World is an honest, raw, and deeply personal presentation that outlines a broad philosophical and practical plan for societal change. Blending philosophy, personal experience, and tech-driven ideas, Bram proposes using small, resilient local groups connected through open-source technologies to rebuild trust and tackle today's challenges. His accessible "philosophy for everything" is simple yet profound.

And who the heck are you!

My name is Bram Diederik.

I'm a software tester who finds lacking software (features) disturbing.

Just google me.

Just a little tag of authenticity

<https://www.yetanotherprojecttosavetheworld.org/wordpress/presentation-one/>

We face problems

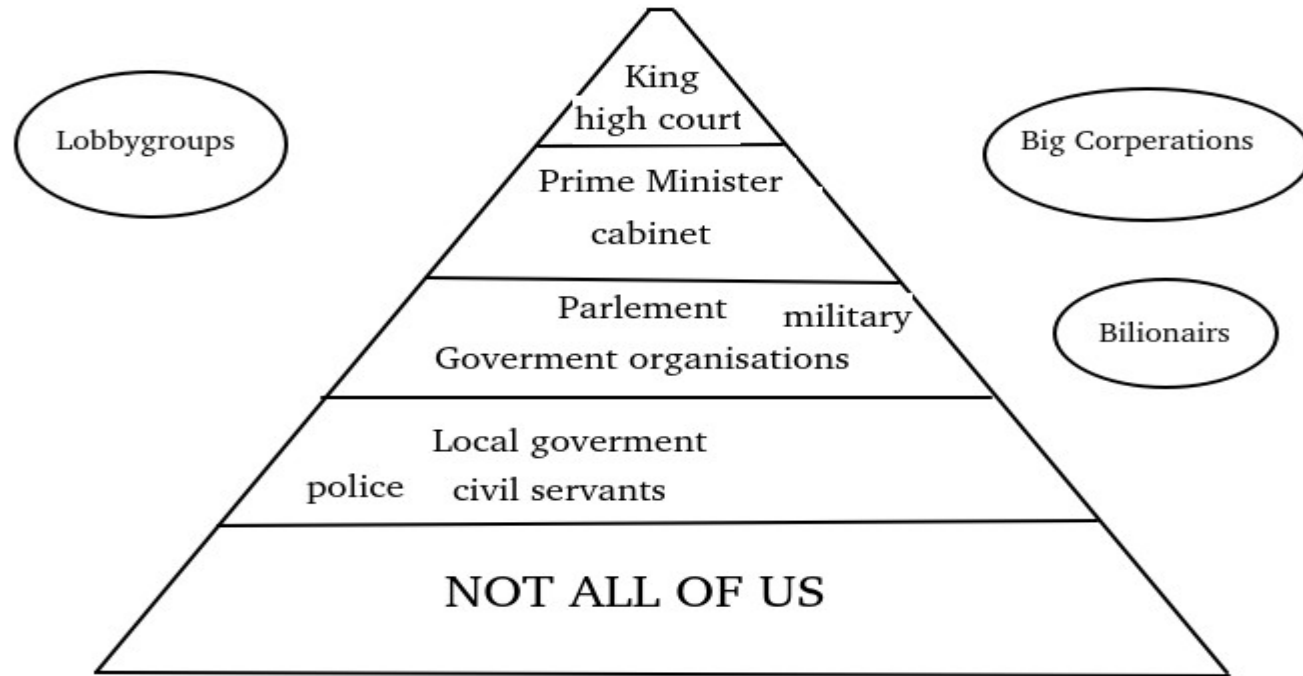

- Our world is changing.
- We cant stay on our current course.
- To many challenges must be act upon now!
- The internet(the flood of knowledge) is to big for most to comprehend.
- There is little trust and much mistrust.

Distribution of power

Some poor effort to display
the distribution of power in
the netherland.

Us loosing power

I have a cunning plan

All including philosophy with pictures that is not lost in translation.

- Back to basic plan principles.
- Everyone is included.

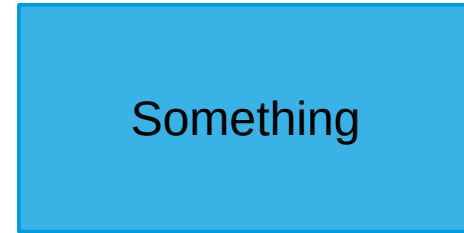

A Philosophy for everything

- Everything is a process
 - Everything is an object
 - An object is not a process
- 
- Something
- Objects exists within three different kind of processes.
 - This philosophy is about seeing everything (objects) in their natural state(kind of process), from YOUR point of view/perspective.

A Philosophy for everything: Lead

- This is something and for your point of view there are no actions (arrows) going to or coming from that something.

for your perspective is lead. (waste of time to process or pay attention to)

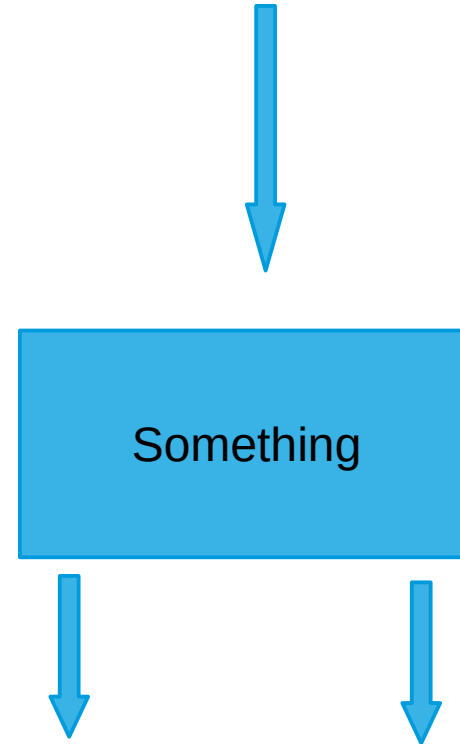

- For example:
 - some tree in a forest
 - A single lost wheel somewhere along the road.

A Philosophy for everything: Metal

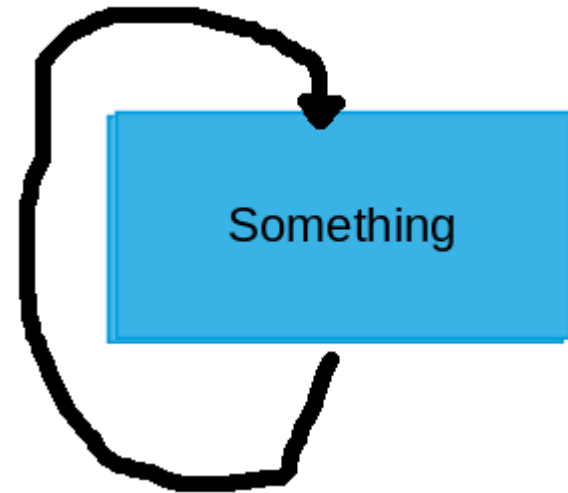

- This something is coming at your path.
and you need to do something with it.
- Teach your children
- Selling/Buying a house.
- Make a pizza.
- Repair a car.
- Squirrel jumping in front of you

All these linear processes (should)
have a clear (expected) end result.

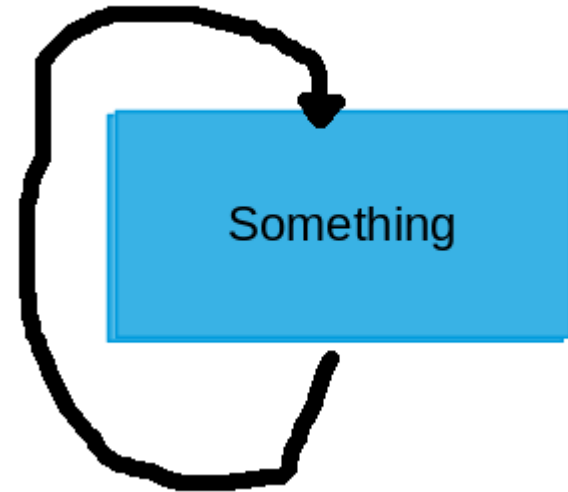

A Philosophy for everything: golden

- This something somehow appeared in circular motion in your perspective.
- And it don't want to stop!
even if you try to stop or alter it,
It natural course is that it goes back
to it self.
- Normally you want it to be reaffirmed/
confirmed, or make it better better.

A Philosophy for everything: golden

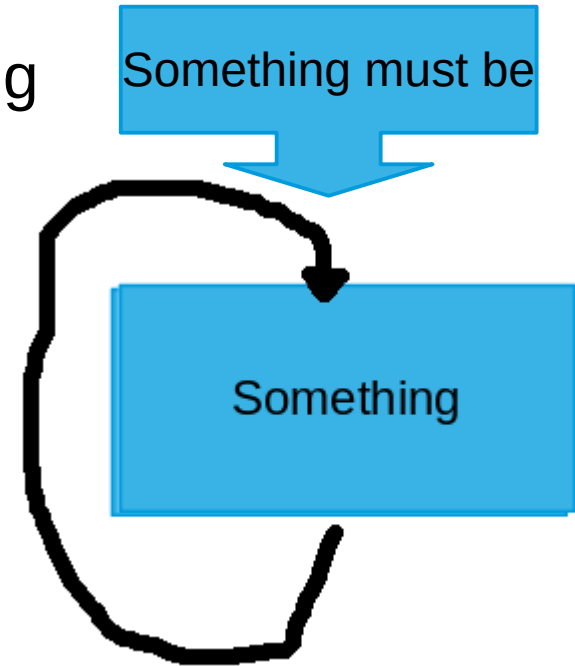

- You love your kids.
- You take care of your old timer car
- Your running your business

A Philosophy for everything: golden

- The arrow always goes from the bottom to the top. And not forced to be something from the top.
that would be extortion, forced labor, slavery.

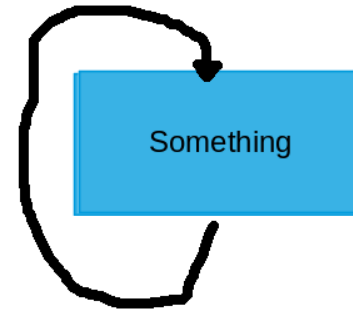

Sure with infants this sometimes required. But it should be out of love?

A Philosophy for everything: golden

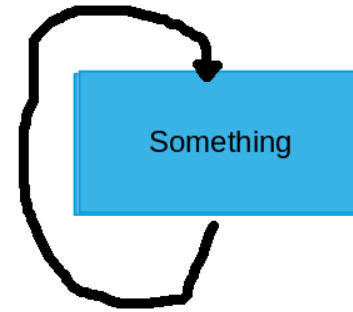

Those somethings are loved and precious.
They deserve respect, care and protection.

No circular process should be stopped
or interfered by outsiders for the intention
of doing harm, make fun of even jokes.

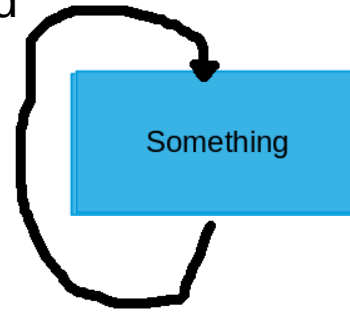

A Philosophy for everything: golden

- Circular processes are responsible for all other forms of processes and objects.
- You are helping your children with home work because you want them to do good in school because you love them.
- Even the tree at the edge of the forest you see when you drive by. is part of the environment. And can be maintained and loved by a forester
- Everyone should try to widener their point of view. Unto a point you see everything connected to each other in one everlasting loop of somethings.

Love stuff as a person

- We can use the everlasting circular view as shining path!
- But, we are biological programmed to survive and expand for over billions of years. We have feelings that are preventing and blocking this point of view.
 - Hate
 - Discrimination
 - Greed
 - Hunger for power
 - Jealousy
 - Pride? (should or should I not cut past the seven deadly sins in here?)

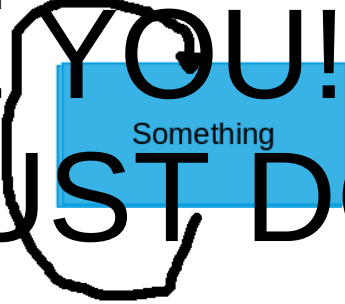

Love stuff as a person

- We can use the everlasting circular view as shining path!
- But, we are biological programmed to survive and expand for over billions of years. We have feelings that are preventing and blocking love.

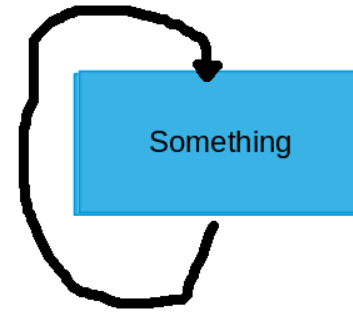

- Hate
- Discrimination
- Greed
- Hunger for power
- Jealousy
- Pride? (should or should I not cut past the seven deadly sins in here?)

WHO AM I TO TELL YOU!
WHAT YOU MUST DO!

Love stuff as a group

- We are biological programmed to survive and expand in groups for over billions of years.
- aren't we all are part off groups.
- We can overcome lesser human behavior with groups.
- A group can control/understand way more stuff than a person.
- We can make all sorts of groups to from the everlasting everything containing circular view together

I have a cunning plan

- I have a cunning plan. For making us all free, through freeing our groups.
- made for and on the internet. (YES THE “EVIL” INTERNET!)
- Based on FOSS. (Free Open Source Software).
- It should run locally on a local computer. An raspberry pi for example. Or in the cloud.

Because people love examples

An Example of FOSS that is changing the world (in its own domain).

It isn't Linux.

Home assistant. (liberate your smart home)

- Smart home hub/platform that puts privacy 1st
- Free Open source software that is owned by a nonprofit foundation
- The foundation is also owner of 240 projects.
- The amount of products with a works with home assistant label are growing.
- It has over 3000 official integrations.
- ESP-Home is a platform for micro controllers to make any hardware integration. (thermostat, smart-meter) fully compatible with home assistant.
- Thousands of integrations available trough hacs.
- Only con. You need to be your own 1st line IT support.

My Home assistant setup

- Lights (tuya and ZigBee)
- (dumb) Fans (made smart with smartswitches)
- Home made audio (mpd/snapcast/music assistant) plays synchrony audio in my rooms. And self hosted streaming on my phone.
- Temperature and humidity (zigbee)
- Thermostat and smart meter integration. (Esphome)
- Voice control
- Online (google AI,nabu casa) and offline mode (ollama, whisper)
- Phone assistant to pick up the phone when busy or unavailable with AI to screen calls.
- When I'm home phone calls to my cellphone are transferred to my home phones, laptop and cellphone.
- And lots more.

liberate our groups

- Groups have been around since the beginning of humanity.
- Groups could be everlasting.
- Everyone can be in a group.
- Its better to convince a group than people individually

We should make a home assistant like platforms for Groups.

What should this software do?

- Provide all needs for the group
 - All processes/Data (optional local)
 - Organization
 - Communication
 - Sharing information
 - Collaboration
- Protect the people(Data) inside the group.
- Just “some” people of the group need to be (IT) support.
- Create a footprint on this planet.

”This is who we are, what we stand for, what we do, what we can do.”
- You can be in as many groups as you like!

Example 1: a sport club

- Member management
- Sport calendar.
- All (live) score data
- Allow members Writing sport reports
- Website for people interested in the sport club
- Communication channels
- Photo sharing
- Micro-blogs
- Cash register

Example 2: a neighborhood

- calendar.
- Blogs (of local events)
- Website about the neighborhood
- Communication channels
- Local news
- Micro-blogs
- store/restaurant/shop ratings and reviews

Example 3: a online gaming alliance/clan

- Strong chain of command and leadership
- Website for potential members.
- Communication channels.
- Tools to play the game better
- Tools to share information
- Back end system to track spies
- Track/manage local processes

hacking!! these groups by other alliances/clans should not be illegal.
(part of the game) improving security as a whole.

Grand Plan

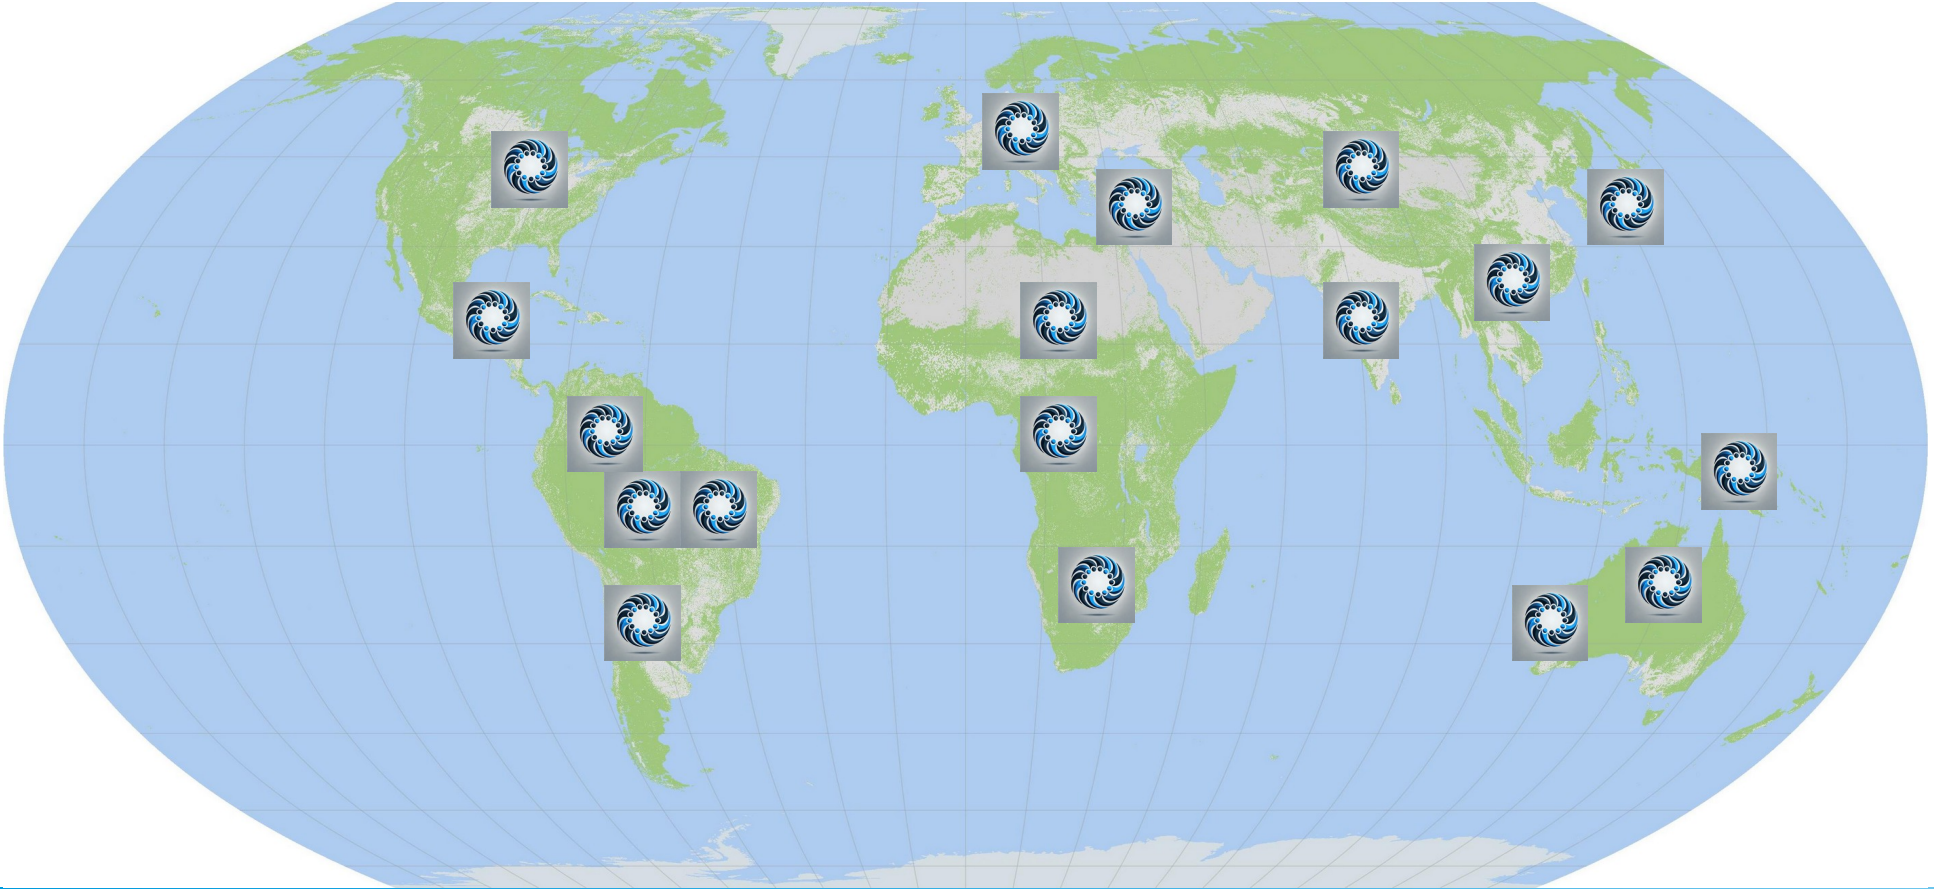

Scatter to home base with these groups

- Politics try to divide us. They put us against each other.
- We will not divide we scatter.
- To our own turf. Our domain
- **THAT WE NEVER WILL SURRENDER AND IS LEGALLY OURS!**

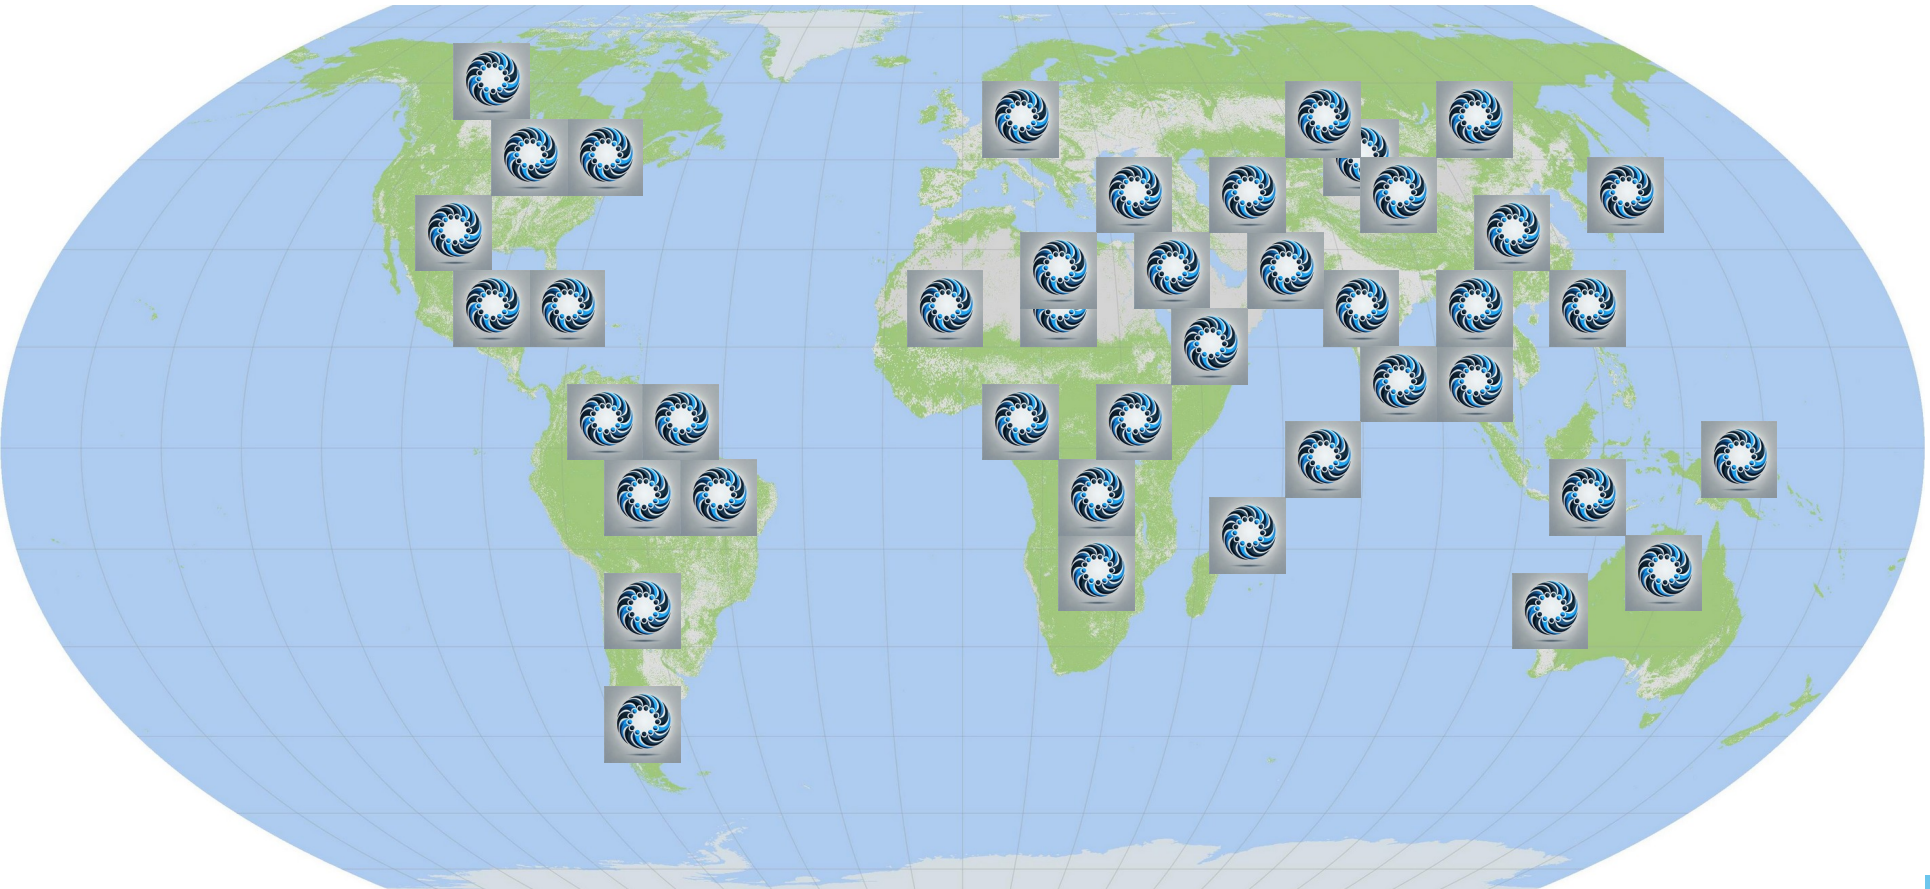

We connect in groups

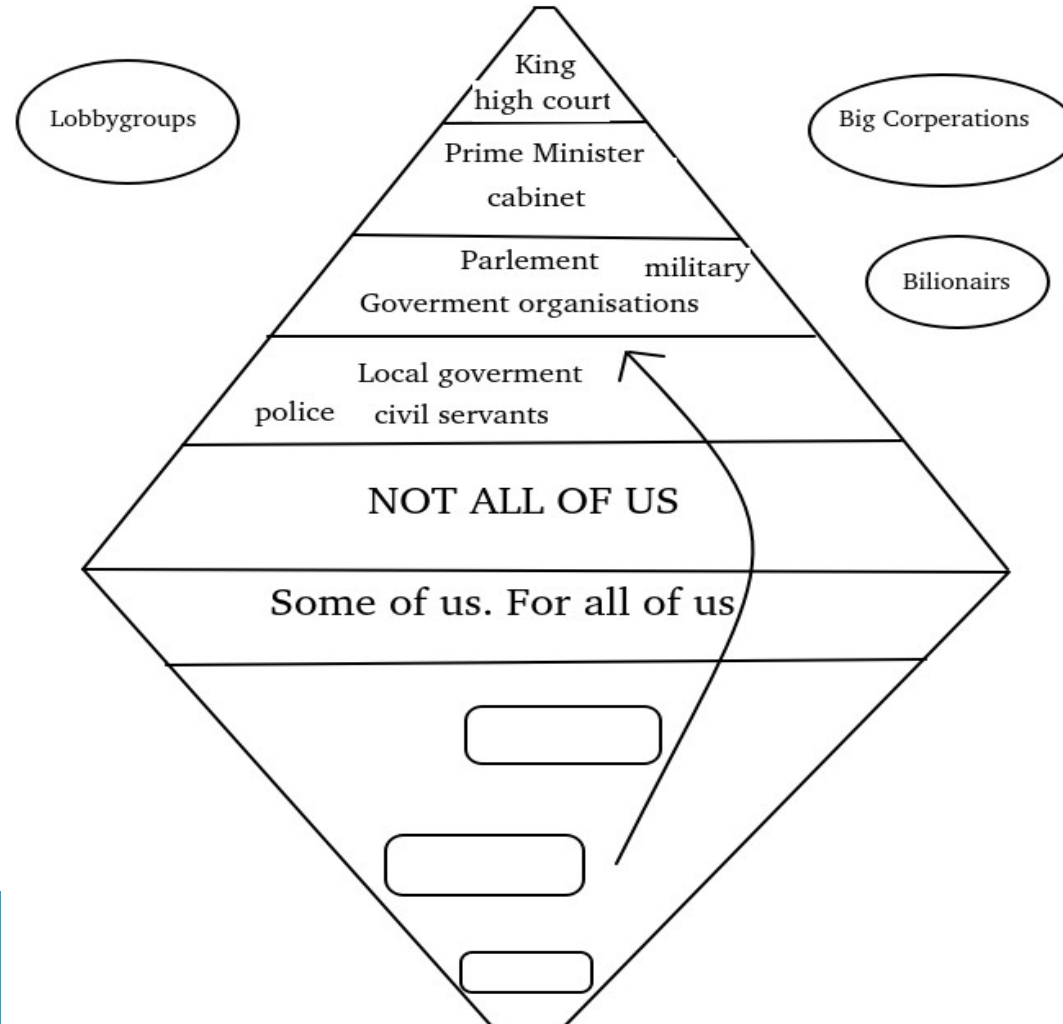

Those groups will connect

Make the whole world connect.

liberate our us trough these groups

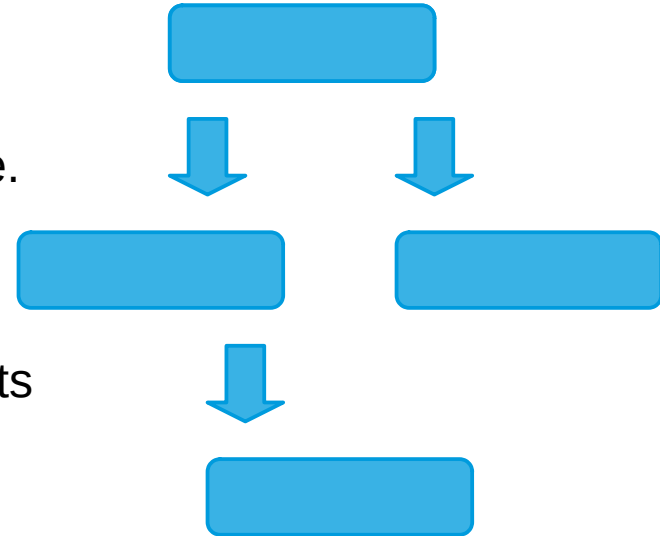

Trust the process.

If we lock in all reality into processes, the processes will reflect reality.
Lying to a process is very hard because future, present and past need to match the lie.

Its like how police (hopefully) investigates a case. They try to uncover as much of a process as possible before talking to suspects to see if their statement matches the known process.

It only works if the whole process is transparant.

Current status

- I have a website with wordpress connected to a discord group.
www.yetanotherprojecttosavetheworld.org
 - You can do a lot with wordpress
 - You can do a lot with discord
 - We can smash stuff into it (like nextcloud) with the discord group management and authentication.
- We need real developers make a plan for good process 1st approach.
 - I have a solution for a process handling system but the name says it all and i want to register the name 1st.
- I don't have much cash.
- "I"(as a person) DON'T WANT YOUR CASH

Our Goals.

Overall goals/approach

- Break down power and the hunger for it, once and for all.
- Freeing our self by the process of freeing others.
- Let groups do (almost) what ever they want.
- Multi dimensional approach to get our goals done.
- Violence is a sign of weakness.

1) Improve and protect what is ours

- We tried to reclaim our streets, but apparently those aren't ours. Our groups, communities, organizations, companies are ours.
- We draw within the lines of free world justice.
- Organic growth within the groups and organic connections between the groups.

2) brace for impact

- I have to say: we are going the wrong way, in a lot of directions, Fast!
- We need to make our local groups and our communities resilient.
- We need to make our groups and purpose known.
- We need to protect our privacy, data and information.

3) play

- Playing is very important, its the best way to learn repetitive skills and creativity.
- We can create and test a lot of community improvements without the possibility of harming real live groups.

4) work for paradise

- If we can create paradise in some place for some time we can expand that place and time!
- The whole plan can be converted to a single dimension: Work.

that's all folks for the plan.

- This is the end of the plan. Presentation will continue. But that's beyond the scope of the plan.

*A wise man can learn more
from a foolish question than a
fool can learn from a wise
answer.*

Some more stuff about me.

In 2015 i had a psychoses. It was a period of at least 10 months going from normal to crisis. In that 10 month period i reached my ballmer peak.

With in this period i did the following things.

- 1) I discovered the relation between processes and objects.
- 2) I felt an aurora around people. (warm, cold, or really hot) a real 360 degrees sense.
- 3) I searched for lost people and gave them inspiration.
- 4) I had a test for persons and religions.
 - 1) I made a ranking of those religions I tested.
No, I'm not telling. (I'm not a prophet)
 - 2) Some atheists where able to pass the test
 - 3) Not all religious persons passed the test.

Xkcd: ballmers peak

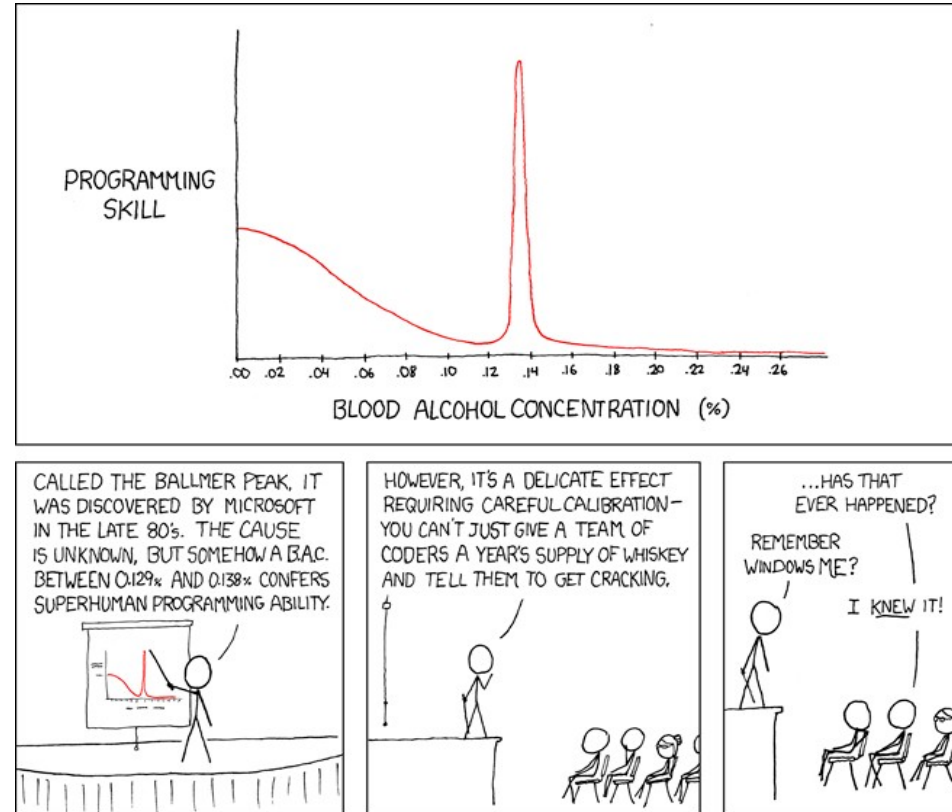

Some more stuff about me.

I'm now beyond by ballmers peek,
I still can excel based on made experience
But I'm (very)fragile as a individual

note:

I'm Currently unemployed. (my previous employee canceled my whole department)

I'm available for a mere 1500 euro a month.
I'm in the dutch WIA i earn 70% before
i lost capabilities to work full time.
I can work 24 hours a week max
Contact me trough linked-in

Some more philosophical stuff

I once when i was young. (7-9 years old)

I saw a philosophical story about Plato's allegory of the cave on the television. When i went trough ballmers peak i saw a lot comparisons with Plato's cave. But all explanations about Plato cave allegory i found online did not match my imprinted idea of the allegory i remembered from when i was just a kid.

This 2500 year old knowledge was very important during my Ballmers peak.

I give you the allegory of the cave in the only way it makes sense for me.

If it isn't close to Plato's cave allegory I mean it is Bram's cave allegory.

Plato's (and if not it's mine) cave Allegory

- Imagine a road. On the road every day people travel. With all kind of shapes and sounds.
 - Shepherds with their sheep
 - Merchants with there goods
 - Solders marching
 - Kids laughing and running.
- At one side of the road their is a big fire.
- On the other side of the road there is an entry of a cave.
 - The fire shades figures of the people on the road in side the cave.
 - Sound of the people on the road scatter and echo into the cave.
- There are people locked inside the cave as long they remember. Looking to a wall inside the cave.
 - They see the shapes of the figures projected on the wall from the people on the road.
 - They hear the echoed/distorted sounds of the people and stuff on the road
 - If you place a man from within the cave upon the road that person will be mind stuck.
All the time it heard and saw the people on the road. That are kids, those are solders
 - If he goes to the cave and speaks inside cave to this friends in the cave to say they are in a cave.
Will his voice be scattered and he is just a shadow projected inside the cave.
 - The people in the cave with see a new share and a sound they never heard before.
They will get scared, frightened and upset of the man outside the cave.

Plato's (and if not it's mine) cave Allegory

- My plan is the same for everyone in any type of cave.
 - I'm not telling my perceptive of reality. "his voice be scattered and he is just a shadow projected inside the cave" "They will get scared, frightened and upset of the man outside the cave."
 - "Our" reality (inside the cave) is not a lie.
 - Its like a 5 or more dimensional form seen in three dimensional space.
 - This is probably our reality ever since "Adam and Eve" where kicked out.
- I'm very worried about people going inside a cave instead of out. Leaving "normal" view of reality due to the amount of fake stuff available on the massive world wide web.
Your not outside the cave when you believe the world is flat for example.
- If the world is flat "the world is round lie" is older than the old Greeks.
- If the world is flat a radar is not limited in range by the curve of the earth.
- If the world is flat and "being round is a lie" why would the Allies and the Nazi's in world war two fight each other while respecting covering up the lie "the world is round".
- Why did the UK put the radar stations near the coast within bombing range of german air plains when you just could put one big radar far away from Germany with massive power.
- All pilots,ham radio operators,sea sailors,world leaders,every person who build radar equipment,maintains the internet cables,does something with space, (and many more) needs to be inside the conspiracy

I don't need your cash note

If you got loads of cash (I can help you make more. Its not i reject capitalism)

- I still got my childhood fantasy world. I have 10+ clean books/movies.
it started before the pyramids ends far in space crossing now a movie or 2
- I have a great idea for a (online)game
- And lots more ideas movies.

Now what!

- Everything begins with a good story.
- Connect to yetanotherprojecttosavetheworld.org
- Learn open source software. If its better for servers, all top 500 super computers, embedded systems, mobile phones its better for your desktop,laptop.
- Embrace your local community.
- Trust (respect) the experts.
- Get a foundation started.
- I have a great way to describe processes in software but all is in the name
- Violence is a sign of weakness!
- Join a religion if you like and accept that God has a plan for you.
Be picky and investigate. They are(were) all meant for a group of people with their point of view in their space and time.
 - Was/(is) there a genuine prophet?
 - Are the rituals still genuine?
 - Are the scriptures still the same scriptures/words the prophet wrote down/spoke?

that's all folks for the presentation

*A wise man can learn more
from a foolish question than a
fool can learn from a wise
answer.*
