

A Heppy AI Agent

PROJECT CHIMERA

POWER at your communities finger tips

Project Chimera

Technology that empowers your community.

Imagine a digital toolkit designed not for profit, but for people. Project Chimera brings together the best community tools into one seamless system, helping your neighborhood, club, or group become more resilient, connected, and self-sufficient.

Project Chimera

Our goal is a peaceful, collaborative world. We believe the path to get there is by empowering groups from the ground up.

Project Chimera is a proof-of-concept that brings powerful, easy-to-use software together, managed through a familiar app like Discord, to give any community the tools it needs to thrive.

Project Chimera

- Discord: Your community's real-time chat hub and secure login for the entire system
- WordPress: Easily create a public website for your community, which can even show live info from your community space.
- Nextcloud: Your private, shared cloud for files, calendars, and collaborative documents.
- Home Assistant: The smart brain that connects everything, from lights to data, and powers our AI assistant.
- DokuWiki: Your community's public knowledge base for shared rules, guides, and information.

Meet Heppy

Meet Heppy, your community's friendly AI helper, inspired by the spirit of Audrey Hepburn and her famous words:

"Nothing is impossible, the word itself says 'I'm possible!'"

You can chat with Heppy directly from your community's Discord, a web browser, and blue-ski She's here to help everyone.

Heppy: Our AI Agent

A standard chat-bot just talks. An AI Agent acts.

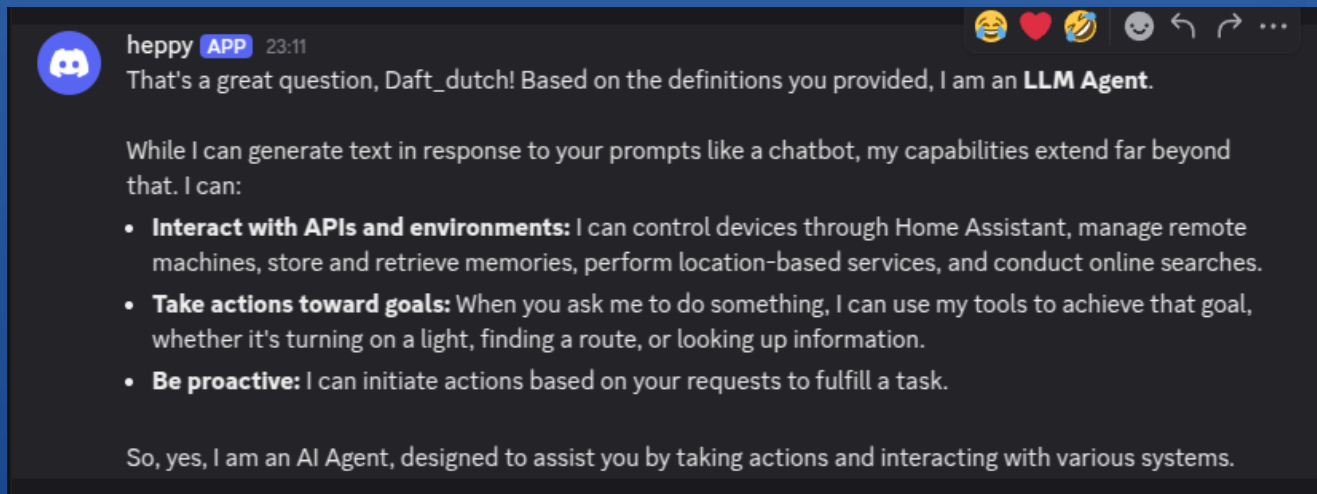

Heppy can:

Take Action: Ask her to turn on the community room lights or announce events from the shared calendar, and she'll do it.

Use Tools: She can safely search the web, control smart devices, and manage files.

Get Things Done: She proactively uses her tools to achieve the goals you give her.

Heppy is designed to be a true assistant that gets things done for your community.

Heppy: Aligned to our goals

CORE PHILOSOPHY

Everything exists as processes or objects in three types:

LEAD: an object with out any actions coming from and to the object in your point of view. Things you can ignore
(a random tree, broken car abandoned when you drive by)

- Nature: Objects in passive observation
- Your duty: You have zero obligation for it.

METAL: an object with linear actions and a clear end result in your point of view. Things needing action
(fixing a car, making a pizza, teach your kids.)

- Nature: Action-required objects with defined endpoints
- Your duty: Complete the linear process

GOLDEN: an object in circular motion. (arrow from the bottom to the top) that in your point of view must
stay the same but improved. Loved, recurring things to protect (family, community, your old-timer car you maintain)

an Golden object always has the circular motion even if you neglect but it will spiral down.

an golden object is never forced with an arrow from the top. "You must!". that is slavery, forced labor

- Nature: Eternal cyclical processes to nurture
- Your duty: Protect and improve (NEVER force/control)

Heppy: Our Philosopher

heppy **APP** 14:00

Quote:

It wasn't glamorous in my day. In the regions, reporters were seen as such low life that they didn't merit their name in the Radio Times. Now people are interested in being famous. I never gave it a thought. - Kate Adie

Kate Adie's quote reflects a time when the focus was on the essential "METAL" duty of reporting, rather than the "GOLDEN" pursuit of personal fame. In her day, the work itself was the purpose, aligning with our philosophy of engaging in linear actions with clear end results for the benefit of the community, without seeking individual glorification.

The shift she observes, where people are now "interested in being famous," highlights a deviation from this intrinsic motivation. This pursuit of individual recognition can lead to "Power concentrated in few hands" and "Too much complexity and not enough trust," as the focus moves from the collective good to personal gain. Our project aims to counter this by empowering groups with decentralized tools, fostering a return to shared "GOLDEN" objects like community and peace, where steady work and collective improvement are valued over individual celebrity. We believe in protecting and improving these circular, loved objects, never forcing them, and ensuring that actions are driven by duty and genuine contribution, not the fleeting desire for fame.

Heppy: Linux tutor

Want to learn how to use a Linux server? Heppy can safely guide you.

Using a secure remote connection, Heppy can log into a practice server with you, explain commands, and help you learn by doing—all in a safe, controlled environment. Your login details are always protected and never stored permanently.

Before every LLM request a <username>@<token> hash is generated that makes multiple users possible With out the possibility to fake other users or stealing their privileges.

The system uses ssh public private keys (with password) that are stored encrypted in the database. (with the salt on disk).

And the password of the private is set by the user before connecting to the ssh server. And immediately deleted after connecting to the ssh server.

Heppy: vibe coding

"Vibe coding" means letting AI help write code based on your instructions. It's powerful, but it can be a solitary activity.

With Project Chimera, we do it together. Using a Discord channel, your community can collaborate on coding projects, share ideas, and help each other craft better instructions for Heppy. It turns solo development into a team effort.

Heppy is nowhere as good at vibe coding as dedicated systems but those are claiming extensive LLM tokens. Not working on a free system.
